DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over KAMINSKI 200/0125771 in view of BORLAND 6,218,952.

Regarding claims 1, 23, 24.

KAMINSKI discloses a housing containing a plurality of electrical circuits which communicate with a first plurality of terminals defining a four way connector and a second plurality of terminals defining a seven way connector.

KAMINSKI does not disclose a monitoring circuit, in operative communication with said four way and seven way connectors, and operative, in response to determining the existence of an attached vehicle input harness, to selectively enable and disable power to said assembly.

BORLAN discloses a system which monitors the functioning of safety and signal light circuits on a trailer (abstract) and verify the lights are operating properly and a means to selectively enable and disable power to said assembly (col. 6, lines 10-18)

It would have been obvious to one having ordinary skill in the art at the time of this invention to have modified the electrical interface device to include the trailer light monitor to monitor and control the enabling or disabling of the trailer lights to verify the

Art Unit: 2836

lights are working and to disable the lights when submersing the trailer in water to protect the lights from bursting when submerged.

Regarding claims 2-22.

The limitations in the above claims are taught in the cited references and would be obvious to combine to produce the claimed four way and seven way connector assemble.

Any inquiry concerning this communication should be directed to Robert L. DeBeradinis whose number is (571) 272-2049. The Examiner can normally be reached Monday-Friday from 8:30 am to 5:00 pm.
